

What is claimed is:

1) An apparatus for reducing supplies and waste comprising,

a) a composite draw path interposed between a vacuum source and a waste

5 material site,

b) a force emanating from said vacuum source to draw material from a waste
site,

c) a canister sized for sealing apposition with a lid,

d) a throat/aperture plug directing waste material to a delivery container,

10 e) a lid having a plurality of fenestration couplings,

f) a delivery container derived from supplies undergoing conversion coupling with
a lid to dispose waste material.

2) An apparatus for disposing waste material in a converted container comprising,

15 a) a material draw force,

b) a canister,

c) a bottle neck/throat plug directing force to and away from a supply container,

d) a container converted from the supply chain to the disposal chain undergoing
derivation from delivering health care,

20 e) a canister lid having at least one fenestration constructed to connect to a
derived supply container,

f) a composite draw path formed at least in part by the interior of a converted
container.

3) An apparatus for converting supplies and reducing waste comprising,

a) a canister lid,

b) a draw path,

5 c) a canister body,

d) a bottle neck throat/pressure transfer plug,

e) a supply container interposable between delivery and disposal,

f) a draw force directed by said path in part co-acting to transform a delivery

container to dispose waste material.
